

InterX™ therapy

Non-drug relief at your fingertips

InterX™ therapy is a non-invasive interactive neurostimulation. It is a medical technology for treating pain, injuries and promoting natural healing.

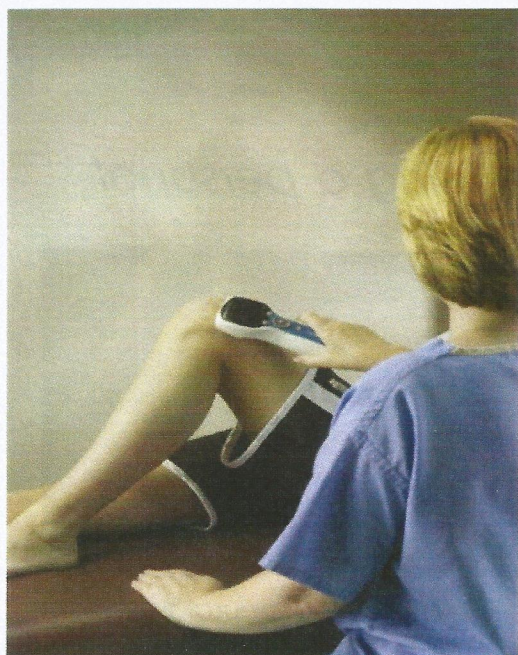

This therapy was originally designed to keep cosmonauts in peak health and has shown to be highly effective across a wide range of conditions, helping a broad spectrum of patients return to an active lifestyle. High profile athletes and professional sports clubs use the InterX™ device on a daily basis world-wide.

How does it work?

The technology is based on an ancient 'Tibetan tapping' technique, but instead of tapping with fingers, it uses electrical pulses at specific frequencies. The InterX™ uses feedback that helps interactively adjust the pulse characteristics. This allows the body to focus on the cause of pain/ injury, and jump starts the healing process leading to a faster recovery.

In general, InterX™ therapy promotes your own body's natural healing and provides sustained pain relief naturally, without side effects.

InterX™ works on pain:

- **sport injuries** (whether is it fresh or long-term) - sprained ankle, rotator cuff injury, shoulder impingement, tennis elbow, carpal tunnel, piriformis syndrome, muscular and ligament strains, patellar-femur syndrome, brachial plexitis, Shlatter's, Ileo-tibial band overuse syndrome, Achilles tendon injuries, shin splits (MTSS), groin pain, etc.
- **workplace related injuries:** neck and lower back pain, disc problems, frozen shoulder, sciatica, repetitive strain injuries.
- **arthritis of the joints.**
- **many others:** headaches, migraines, Irritable Bowel syndrome (IBS), period pains, trigeminal neuralgia, fibromyalgia, complex regional pain syndrome (CRPS).

InterX™ is a safe and effective treatment for adults and children. It is safe, because the stimulation is very precise, at the exact place, with optimal intensity and time-dosed without over-stimulation. Remarkable results have been proven by peer-review studies and in use by many hospitals and sport organisations world-wide. The InterX™ is an outstanding tool to deal with pain relief and speeding up healing time in comparison to other professional devices.
